

About Shore

Shore is an employee-owned medical design and development consultancy, with an excellent reputation in the market for delivering solutions across a wide range of projects, working collaboratively with multiple long-term clients.

We offer exciting career opportunities to see your ideas come to life in exceptional products that have a positive impact on people's lives, working from early-stage design through to manufacturing and supply.

Our collaborative culture is one of the key elements of our success, and we encourage knowledge sharing and communication across the company. Our office is a converted grain store in Leith, the thriving waterfront area of Edinburgh which has a mixture of creative businesses, bars, and restaurants.

Role

We are seeking a Graduate Mechanical Design Engineer who will play a key role contributing to a challenging and varied project mix, all within an excellent working environment. You will have strong technical skills and be qualified to degree level in a relevant discipline ideally with industry experience in a suitable design or engineering discipline.

We have a formal training & development programme to support your growth, both via structured training and on the job mentoring and support from senior colleagues.

You will be equally comfortable working alone with supervision or as part of a wider project team. At all times bring your own powerful creative input into the collaborative mix, always pushing the boundaries with fresh ideas and technical solutions.

Benefits

You will receive a competitive salary, great benefits package including company performance profit share scheme. We acknowledge the importance of maintaining a strong work life balance which we encourage through flexible working arrangements.

Primary Role

As part of a skilled and dedicated team, provide professional Product Design / Mechanical Engineering expertise on multiple projects on everything from concept generation and engineering analysis through to detailed design and formal verification.

Ideal Requirements / Skills

- Relevant degree in Mechanical Engineering or Product Design
- Strong technical and creative abilities
- 3D CAD software expertise
- Solid understanding of engineering principles
- Excellent presentation & communication skills
- Knowledge of the full product design life cycle
- Self-starting with a can do attitude, proven ability to work individually or in a team with little guidance
- Professional awareness and appreciation of client focus
